Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 21, 23, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hershey et al. [U.S. Pat. 5,844,949] in view of Tsunehiro [U.S. Pat. 6,304,761]

**Regarding claim 21:** Hershey et al. teach the known concept of transmitting commands and data on the power line (col. 2, lines 9-15) except for determining if a dotting portion is present in the signal. However, determining if a dotting portion is present in the signal (such as 10101010...) is old and known in the art as taught by Tsunehiro (fig. 2, col. 5, lines 20-30). In view of the teachings of Hershey et al. and Tsunehiro, it would have been obvious to the skilled artisan to combine the teachings of Tsunehiro and Hershey et al. so that there is less possibility of loss of communications due to interference.

**Regarding claim 23:** Hershey et al. disclose a local controller (figure 3, col. 5, lines 45-55).

**Regarding claim 25:** Hershey et al. disclose the signal comprising a GHM signal (col. 3, lines 10-18).

***Allowable Subject Matter***

3. Claims 1-20 are allowed.

Art Unit: 2632

4. Claims 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Childress [U.S. Pat. 4,821,292] discloses adaptive limiter/detector which changes time constant upon detection of dotting pattern.
